## 01 Applications

CargoSorb container desiccants offer a solution for e.g.

- Container rain
- Moisture damage
- Rust
- Moulding

## 02 Technical information

CargoSorb provides moisture-free transport overseas and ensures your shipment arrives at its destination dry and undamaged. Our desiccants have a high absorption capacity, making them the perfect solution for the overseas shipping of your 20- and 40-foot containers.

Our CargoSorb container desiccants are high-quality products. The rear consists of a permeable Tyvek membrane that does not release moisture once absorbed. The result is a high absorption capacity of circa 300% and zero leakage! Because of the diffusion-resistant foil on the rear of the product, all CargoSorb products can also be placed on top of the goods if it is not possible to hang them inside the container.

The product prevents condensation and container rain and protects your products against moisture, rust and moulding. CargoSorb is available in several versions. Currently, CargoSorb is the #1 container desiccant for the overseas and land transport of your cargo.

CargoSorb was tested by the BFSV / D-Hamburg certified laboratory under extreme climate conditions in a climate chamber.

Product	Absorption capacity	Product number	20ft Container	40ft Container	Qty. per box
CargoSorb Single 125gr	0,4 L	CSS125	x	x	100
Kindsorb 1.000gr	0,6 L	KSH010	x	x	20
